

DevOps Engineer/QA Test Lead

Summary:

- A competent IT professional with 15 years of experience, including 13 years in software testing and 2 years as a DevOps Engineer.
- Strong knowledge of STLC methodologies such as Waterfall and Agile.
- Experienced in testing Web Applications, Client/Server applications, Middleware/Web services such as Real Time Messaging services, SOAP API, REST API, and Micro Services.
- Experienced in Functional Testing, System and Integration Testing, Regression Testing, GUI Testing, UAT, Version Proxy Testing, Browser Compatibility Testing and Web services API Testing.
- Around 4 years of experience for automating new test cases for each release & created to the early automation using Parasoft SOA and Soap UI tool.
- Experienced in building and automating CI/CD pipelines, managing cloud infrastructure on Amazon Web Services, and deploying containerized applications
- Hands-on expertise with Jenkins, Docker, and Kubernetes, along with Infrastructure as Code using Terraform.
- Strong background in quality assurance combined with DevOps practices to improve release efficiency, system reliability, and automation.
- AWS DevOps Engineer with hands-on experience in designing and implementing CI/CD pipelines on Amazon Web Services
- Skilled in automating build, test, and deployment workflows using Jenkins and AWS Code Pipeline
- Experience in containerization using Docker and orchestration with Kubernetes
- Good understanding of Linux administration, networking, and security best practices
- Proficient in deploying applications on Amazon EKS and managing cloud infrastructure
- Strong knowledge of Infrastructure as Code using Terraform
- Experienced in monitoring, logging, and troubleshooting using Amazon CloudWatch.
- Strong Experience in testing tools like HP ALM (Application Lifecycle Management), HP QTP (Quick Test Professional), JIRA, and Technology Delivery Platform.
- Good knowledge in Para soft, Intelligent Test Environment, Eclipse, WSDL Builder, Splunk, Rally, TOAD, PRISM, Altova XML SPY, Jenkins, Aqua Data Studio, Google Postman, JSON, Splunk etc.
- Good knowledge on the billing systems like AMDOCS, Telegence, Enabler, Ensembler and other systems.
- Strong experience in understanding of business requirements, Effort estimations, test plan and strategy, designing High Level Business Scenarios based on requirements, designing Test Cases, Test data management, Execution and Test Reports.
- Good experience in Batch testing and monitoring jobs using Jenkins Tool.
- Collaborated with development, QA, and business analysis teams to understand test data requirements and ensure alignment with project goals.
- Create automated workflows, process models, and decision tables to optimize operations and ensure streamlined processes.
- Lead BPM automation projects, ensuring timely delivery, within scope, and meeting business objectives.
- Coordinate with cross-functional teams (IT, business analysts, developers, etc.) to ensure project success.
- Leverage APIs, web services, and other integration methods to enhance system functionality.
- Monitor key performance indicators (KPIs) for automated processes and

Technical Skills:

- Manual Testing, Functional

workflows.

- Performed backend testing to verify the data integrity by passing SQL Queries.
- Performed Input validations, User Interface Validations, Browser Compatibility testing and Navigation Testing.
- Configuration of Testing Environment (e.g. Onboard to BOS) and understanding of BOS/CAD ICD and messages.
- Knowledge of Onboard (OB) Simulators. Track, install and configure OB software (I-ETMS).
- Participate in Agile release and sprint planning.
- Ability to utilize UTCS to create trains, bulletins, authorities etc. for testing efforts for Positive Train Control (PTC) operations.
- Good knowledge on Railway domain systems like Siemens BOS, Wayside, UTCS CAD and IETMS/Wabtec BOS & Onboard.
- A team player and self-starter with an ability to learn new software using manuals within a short period of time.

Qualification:

From 2012-
2014

M.S: Telecommunications and Software Engineering

BITS PILANI - Rajasthan

From 2005-
2009

B.E: Electronics & Communication Engineering

Anna University - Chennai

Project #1:

Project #1:

Title : Vision 2.0 - JITR Billing
Client : Verizon Wireless, Irving, Texas TCS Contract
Role : DevOpsEngineer
Company : Tata Consultancy Services
Domain : Telecom Domain
Tools Used : EC2 , ELB, S3,SNS,IAM, ECR, Docker hub, Jenkins, Kubernetes,ECS,EKS, Terraform,Ansible,GIT,SVN
Project Start Date : 11/06/2023
Project End Date : Til

Description:

A process of collecting usage, aggregating it, applying required charges and finally generating invoices for the Verizon wireless customers. The Telecom Billing process also includes receiving and recording payments from the customers.

Responsibilities:

- Designed and implemented CI/CD pipelines using Jenkins and AWS Code Pipeline for automated build, test, and deployment
- Integrated source code repositories from GitHub using webhooks to trigger pipelines on code commits
- Automated build and deployment workflows using Jenkins pipelines (Declarative & Scripted)

- testing,
• Regression testing,
• Smoke &
• Sanity testing,
• Integration testing and
• Automation Testing,
• UAT,
• Production Support

TOOLS:

Platforms: Linux

(AWS, Red Hat, Ubuntu), Windows, Centos •

Languages: C, JAVA, Shell scripting, Bash Python, JavaScript •

AWS Cloud: AWS (EC2, Elastic Beanstalk, ELB, Route53, S3,SNS, RDS, IAM, Code cloud,Lambda CloudFormation)

Networking:

HTTP/HTTPS, FTP, SSH, DNS, TCP/IP, DHCP

Web Technologies:

HTML, XML, SOAP WSDL, XSD, XSL

Container services:

Docker, Kubernetes, ECS,EKS,ECR,DockerHub

Continues

Integration/Deployment tools:

Jenkins, Terraform,GitLab

Configuration

Management: Ansible, Source Code

Management: GIT, SVN

Monitoring and

logging tool: Splunk, CloudWatch, Prometheus, Grafana

Database: MySQL, Redis, DynamoDB

QA Technologies and skills:

- Salesforce CRM,
- ARIA,
- Matrixx, NOKIA and ESB,
- Siebel CRM,
- Siemens BOS,

Specifications or Requirement documents.

- Preparation of writing test cases using Gherkin to define the acceptance criteria for a feature or user story.
- Coordinating with onsite team, offshore team for the technical inputs and queries to resolve any technical and project issues.
- Executed on Functional testing, UAT, Regression testing, Sanity testing, Smoke Testing & Negative testing with help of SOAP UI, Postman tool.
- Managed end-to-end order processing, ensuring accurate documentation and timely service activation.
- Coordinated with cross-functional teams to optimize workflow efficiency and resolve order discrepancies.
- Oversaw invoicing, payment reconciliation, and dispute resolution to maintain accurate financial records
- Collaborated with sales and marketing teams to streamline catalog management and improve customer accessibility.
- Tested OSS provisioning flows to ensure SIMs, services, and network features were activated correctly for customers
- Validated Physical SIM, eSIM, and Dynamic SIM lifecycle including activation, suspension, reactivation, and SIM swaps
- Verified IMSI, ICCID, and MSISDN mapping across OSS, network elements, and BSS systems
- Performed eSIM QR code activation and remote profile downloads for supported devices
- Executed end-to-end testing from service provisioning through network usage, mediation, rating, and billing
- Validated network service enablement such as voice, data, SMS, roaming, and VAS in OSS systems
- Ensured usage records (CDRs/EDRs) were captured correctly by the mediation layer without loss or duplication
- Verified real-time and batch rating for voice, SMS, data, and roaming based on tariff plans
- Tested bundles, add-ons, discounts, promotions, and zero-rating rules for accurate charging
- Validated prepaid balance deductions and postpaid usage accumulation
- Verified Fair Usage Policy (FUP), data caps, throttling, and over-usage billing
- Reconciled network usage, mediation records, rated usage, and billed amounts to prevent revenue leakage
- Tested billing cycles, invoice generation, proration, taxes, and one-time charges
- Validated roaming billing for both inbound and outbound subscribers
- Verified payments, refunds, adjustments, and credit limits in BSS
- Performed regression testing after new plans, price changes, and system releases
- Logged, tracked, and validated fixes for OSS/BSS defects in provisioning, rating, and billing
- Supported UAT, go-live, and production validation for new telecom products and services
- Monitored OMS provisioning workflows, identifying technical issues and implementing rapid solutions
- Ensured compliance with financial policies and industry regulations while optimizing revenue management.
- Collaborated with development, QA, and business analysis teams to understand test data requirements and ensure alignment with project goals.
- Review business requirements and functional specifications documents to gain a clear understanding of the expected behavior and functionality of Salesforce CRM.
- Verify that Salesforce CRM is responsive and performs well with large amounts of data.
- Good understanding of working on the applications developed for touch screen phones.

- Verify data integrity and ensure that the data is being stored and retrieved correctly from Salesforce.
- To write test cases, test plan and test scenarios for the new features, perform Integration Testing.
- Designed and implemented test data management strategies to ensure the availability of high-quality, relevant test data for various testing phases
- Conducted training sessions on test data management best practices for team members, promoting a culture of effective data handling.
- Managing defect life cycle including defect creation, defect tracking and root cause analysis of defects.
- Conducted meeting with the System engineers on briefing the requirements for the new features and them
- expectation of the system behavior.
- Uploading test cases in QTest tool
- Manual execution of test cases.
- Analyzing test results, Updating and maintenance of Defects in QTest Tool.

Project #3:

Title : Vision 2.0 - JITR Billing
Client : Verizon Wireless, Herndon, Virginia
Role : QA Test Lead
Domain : Telecom Domain
Tools Used : JITR Billing, JIRA, Confluence, Cassandra, Unix,SQL, Salesforce CRM,Qtest
Project Start Date : 06/02/2022
Project End Date : 01/24/2023

Description:

A process of collecting usage, aggregating it, applying required charges and finally generating invoices for the Verizon wireless customers. The Telecom Billing process also includes receiving and recording payments from the customers.

Responsibilities:

- Work on applications like Client Server, Web Based, Mobile Application, APIs, Async WS, Batch Processes.
- Responsible for testing the End-to-End order Management scenarios in Siebel (New, Inflight, Cease, Suspend)
- Validating the integration of orders with other systems and completing the entire workflows.
- Creation Of customers, configuration of each product and validating the entire flow till billing
- Preparation of Test Scenario & Test Cases preparation using Functional Specifications or Requirement documents.
- Responsible for service provisioning and activation of the products.
- Executed Functional testing, Regression testing, Sanity testing, Smoke testing & Negative testing as per the requirements.
- Maintained Traceability Matrix to track the requirements to the test cases to ensure complete test coverage in the ALM.
- Managed end-to-end order processing, ensuring accurate documentation and timely service activation.
- Coordinated with cross-functional teams to optimize workflow efficiency and resolve order discrepancies.
- Oversaw invoicing, payment reconciliation, and dispute resolution to maintain accurate financial records
- Collaborated with sales and marketing teams to streamline catalog management and improve customer accessibility.
- Monitored OMS provisioning workflows, identifying technical issues and implementing rapid solutions
- Ensured compliance with financial policies and industry regulations

while optimizing revenue management.

-
- Review business requirements and functional specifications documents to gain a clear understanding of the expected behavior and functionality of Salesforce CRM.
- Design test data for testing various scenarios in Salesforce CRM (like leads, accounts, contacts, opportunities).
- Execute test cases manually across different Salesforce modules (Sales, Service, Marketing, etc.).
- Responsible for service provisioning and activation of the products with help of Salesforce CRM.
- Preparation of Traceability Matrix.
- Conducted peer review for Test cases review and Test scenarios.
- Responsible for conducting defect triage call.
- Sending the timely and appropriate test results updates to Development and Business team.
- Performed backend testing to verify the data integrity by passing SQL Queries.
- Performed Input validations, User Interface Validations, Browser Compatibility testing and Navigation Testing
- Coordinating with various teams (development, QA, business analysis) to gather test data requirements and ensure alignment can be time-consuming and complex.
- Updating the Defect status in Quality center and defect reporting to Business team and retesting the defects.
- Analyzing test results, Updating and maintenance of Defects in Quality center.

Project #4:

Title : Provider Data Transmission (PDT)
Client : Blue Cross Blue Shield (BCBS), Atlanta, Georgia
Role : E2E/UAT Test Lead/ Test Manager
Company : Cognizant
Domain : Healthcare Insurance Domain
Tools Used : QTest, SAFT Framework ,JIRA, SOAP UI, Ready API, Postman, Unix, Tera data, Salesforce CRM
Project Start Date : 01/03/2021
Project End Date : 06/16/2022

Description:

Provider Data Transmission (PDT) is used to manage Provider Data across BCBS Plans. The modernized provider data foundation will improve accuracy, accessibility and timeliness, enable the BCBS system to execute its data leadership priorities, and further the Brands' influence as a thought leader in the industry through more effective data analytics.

Responsibilities:

- Preparation of Test Strategy and creating Test Plan, estimation and effort tracking.
- Preparation of Test Scenario & Test Cases preparation using Functional Specifications or Requirement documents.
- Validating the API response using the SOAP UI and Ready API tool.
- Executed on Functional testing, UAT, Regression testing, Sanity testing, Smoke Testing & Negative testing with help of SOAP UI, Postman tool.
- Automated the API calls using the SAFT framework with the REST APISS
- Worked in CA Dev test tool in creating virtual services to support our API Testing.
- Defect Logging and Defect Tracking in JIRA Tool.
- Review business requirements and functional specifications documents to gain a clear understanding of the expected behavior and functionality of Salesforce CRM.
- Verify that Salesforce CRM is responsive and performs well with large amounts of data.

- Performed backend testing to verify the data integrity by passing SQL Queries.
- Uploading test cases in QTest Tool.
- Conducted training sessions on test data management best practices for team members, promoting a culture of effective data handling.
- Designed and implemented test data management strategies to ensure the availability of high-quality, relevant test data for various testing phases.
- Keeping track of changes to test data versions can be challenging, especially in dynamic environments. Proper version control practices are necessary to avoid confusion and ensure traceability.
- Responsible for conducting the defect triage call and stakeholders.

Project #5:

Title : Positive Train Control
Client/Company : Norfolk Southern Corporation, Atlanta, Georgia
Role : SME for Positive Train Control /QA Test Engineer
Domain : Transportation/Railway Domain
Tools Used : FileZilla, HP UNIX 10.0, Siemens BOS, Wabtec
BOS, UTCS, Wabtec OB, UFT and Quality Center ALM, Oracle SQL Developer, SharePoint
Project Start Date : 07/01/2019
Project End Date : 12/30/2020

Description:

Positive train control (PTC) is a system of functional requirements for monitoring and controlling train movements as an attempt to provide increased safety. Positive Train Control (PTC) is GPS-based safety technology capable of preventing train-to-train collisions, over-speed derailments, unauthorized incursion into work zones and train movement through switches left in the wrong position. PTC monitors and, if necessary, controls train movement in the event of human error. PTC may also bring trains to a safe stop in the event of a natural disaster.

Responsibilities:

- Involved in Requirement Analysis of BOS, CAD and Onboard, estimation and test effort tracking.
- Preparation of Test Scenario & Test Cases preparation using Functional Specifications or Requirement documents.
- Executed Functional testing, Regression testing, Sanity testing, Smoke Testing & Negative testing as per the functional requirements (BOS, OB and CAD).
- Validating PTC (Positive Train Control) and Regulatory Compliance of NS railroads system.
- Track Defects in both internal systems such as HP ALM, SharePoint and informing Vendor management systems with required logs and other artifacts.
- Work closely with vendor, Developer, Business analyst and within the team to assure that's the system is working as expected and resolve system issues in case of any.
- Performed backend testing to verify the data integrity by passing SQL Queries.
- Performed UAT, User Interface Validations, Browser Compatibility testing and Navigation Testing.
- Taking part in test execution and scheduling, impact analysis review, peer review and client/vendor deployment meetings.
- Ensure planned test cases are executed, testing progress are required in ALM (Pass/ Fail, downtime, issues etc.) and publishing and distributing reports/metrics to the team at the end of testing.
- Modify existing test cases and create new test cases along with the identification of the test data and per new requirements demands.

- Updating the Defect status in Quality center and defect reporting to Business team and retesting the defects.
- Ability to read BOS logs and troubleshoot during testing efforts.
- Knowledge of tools used for debugging and viewing OB logs.
- Ability to utilize UTCS to create trains, bulletins, etc. for testing efforts (see ICD for Message List)
- Knowledge of triggers for OB and Wayside messages required for testing.
- Ability to read CAD and BOS logs and troubleshoot during testing efforts - including understanding the relationship between ICD and data in the logs
- Ability to verify health of CAD segment via smoke test, automation test and log validation

Project #6:

Title : Redwing_BPM
Client : American Telecom & Telegraph (AT & T Inc),
 Plano, Texas
Role : Test Lead
Company : Techamhindra LTD
Domain : Telecom Domain- OSS & BSS
Tools Used : Siebel CRM, Quality Center ALM, FileZilla, WSDL
 Builder, Splunk, HP UNIX 10.0, JIRA, Jenkins, Parasoft, ITE, SoapUI, Jira,
 POSTMAN, Eclipse IDE, Altova XML SPY, SharePoint, CA Dev Test
Databases : SQL
Project Start Date : 06/10/2017
Project End Date : 28/06/2019

Description:

AT&T Inc. is an American multinational telecommunications conglomerate, headquartered at Whitacre Tower in downtown Dallas, Texas. AT&T provides mobile telephone services and the largest provider of fixed telephone services in the United States, and also provides broadband subscription television services through DirecTV. AT&T API platform enables direct access to near real-time product availability and quoting capabilities for select services. API capabilities can be realized from virtually any device handheld or desktop putting the power of the technology into the hands of users. A part of CST team we ensure that the Common Services organization delivers high-quality code to its clients by designing and executing comprehensive system tests to verify the functionality of the code and identify defects so that these defects can be corrected early in the Software Development Life Cycle (SDLC), thus preventing system failures that negatively impact AT&T's ability to provide service to its customers.

Responsibilities:

- Preparation of Test Strategy and creating Test Plan, estimation and effort tracking.
- Preparation of Test Scenario & Test Cases preparation using Functional Specifications or Requirement documents.
- Designed and implemented service virtualization solutions using tools like Parasoft, CA Dev Test Tool to simulate unavailable or third-party systems.
- Executed on UAT ,Functional testing, Regression testing, Sanity testing, Smoke Testing & Negative testing with help of SOAP UI, Postman and Parasoft tool.
- Integrated service virtualization into CI/CD pipelines, enabling early and continuous testing in agile workflows.
- Develops stubs and mocks for APIs, databases, or third-party services using Parasoft Tool
- Identify the scope of testing and skills that are needed and balance the test resources accordingly with those needs based on their own interests as well.
- Identify the tools for test reporting, test management, test automation.

- Performed Backend Testing data validation testing by writing queries on SQL Developer to validate the data against Oracle database.
- Participate in Agile ceremonies such as Sprint Planning, PSI Planning, Story Writing, Tasks, Sprint Review and Sprint Retrospective.
- Test plan/strategy preparation and review the Test Cases with Requirement Owners and Business people to ensure full test coverage.
- Managed end-to-end order processing, ensuring accurate documentation and timely service activation.
- Coordinated with cross-functional teams to optimize workflow efficiency and resolve order discrepancies.
- Oversaw invoicing, payment reconciliation, and dispute resolution to maintain accurate financial records
- Collaborated with sales and marketing teams to streamline catalog management and improve customer accessibility.
- Provided technical leadership and mentorship on Service virtualization best practices and tool adoption.
- Monitored OMS provisioning workflows, identifying technical issues and implementing rapid solutions
- Ensured compliance with financial policies and industry regulations while optimizing revenue management.
- Conditioning Data required for test execution using Telegence.
- Responsible of conducting defect triage call.
- Good experience in Batch testing and monitoring jobs using Jenkins Tool.
- Performed backend testing to verify the data integrity by passing SQL Queries.
- Performed Input validations, User Interface Validations, Browser Compatibility testing and Navigation Testing
- Performing SOAP, REST and micro service testing in different testing stages that includes Functional, Regression Testing, Integration Testing, Version Proxy Testing, gateway Testing and validate the request and response. It also includes verifying the logs using Splunk and database entries in DB Virtualizer and Aqua Data Studios using SQL query.
- Maintained defects in JIRA and prioritized the level of defect according to business impact.
- Defect Logging and Defect Tracking in HP ALM, Jira, Technology Delivery Platform.
- Performed backend testing to verify the data integrity by passing SQL Queries.
- Performed Input validations, User Interface Validations, Browser Compatibility testing and Navigation Testing.
- Coordinate with multiple stakeholders like environment team, configuration team, development team and database team for conducting integration system testing and validate the results with business customers.
- Report and Upload Test Results in appropriate SVN locations for future reference.
- Provide Knowledge Transfer documents for the functionality tested, which is useful for everyone in the project. Conducting knowledge transfer session as required.
- Responsibilities include identifying skill gaps and plan training and education sessions for the identified test resources initiative towards Continuous improvement and excellence throughout the testing life cycle.

Project #7:

Title	:	BPP PQS Thistle Buynet Test Support
Client	:	British Telecom, Pune, India
Role	:	Production Support/Test Engineer
Company	:	Techmahindra LTD
Domain	:	Telecom Domain- OSS & BSS
Environment	:	Thistle, Buynet, PQS
Testing Tools used	:	Quality Center ALM, Jira, FileZilla, HP UNIX 10.0.

Databases : SQL
Project Start Date : 04/20/2013
Project End Date : 05/21/2017

Description:

This project is to test and supports the BT's Payment receipt used for BT's Billing and Payment. This project includes, component integration testing, Regression Testing, System Integration Testing, System Testing and Test harness testing.

This project also tests and supports the Applications for Thistle, Buynet and Payment Query System (PQS) component integration environments.

Responsibilities:

- Preparation of Test Scenario & Test Cases preparation using Functional Specifications or Requirement documents.
- Executed on UAT, Functional testing, Regression testing, Sanity testing, Smoke testing & Negative testing as per the requirements.
- Responsible for conducting defect triage call.
- Preparation of Traceability Matrix.
- Extensively automated Regression and Functional test suites by developing test cases and test suites using Soap UI.
- Used Jira to open bugs, create tasks and user stories, initiate change requests.
- Maintained Traceability Matrix to track the requirements to the test cases to ensure complete test coverage in the Jira.
- Conducted in peer review of Test Specification.
- Performed backend testing to verify the data integrity by passing SQL Queries.
- Good experience in Batch testing and monitoring jobs using Jenkins Tool.
- Performed Input validations, User Interface Validations, Browser Compatibility testing and Navigation Testing
- Updating the Defect status in Quality center and defect reporting to Business team and retesting the defects.
- Functional testing including System, Integration, Regression, User Acceptance Testing (UAT)
- Sending timely and appropriate updates to Development and Business team.
- Involved in Defect reporting and retesting the defects.
- Uploading test cases in Quality center.
- Manual execution of test cases.
- Analyzing test results, Updating and maintenance of Defects in Quality center.

Project #8:

Title : LD Regression AMD
Client : American Telecom & Telegraph (AT & T Inc),
Pune, India
Company : Techmahindra LTD
Role : Test Engineer
Domain : Telecom Domain- OSS & BSS
Environment : Tuxedo, Siebel CRM
Testing Tools Used : Quality Center ALM, Siebel CRM, FileZilla, HP UNIX 10.0
Databases : SQL
Project Start Date : 09/31/2011
Project End Date : 02/10/2013

Description:

This project is to test AT&T's Legacy Telegence Billing System used for AT&T Long Distance Billing. This product is a modified version of Amdocs Ensemble. This project includes Regression Testing, System Integration Testing, System Testing and Performance Testing. This project has belonged to OSS and BSS

domain in this project.

This project also Tests the Ancillary Applications for Telegence and Lightspeed (Another project in AT&T) including - Business Objects (BO), ODR and TDMS. In Addition to these, ACBA - An ancillary application of AT&T CRM, is also being tested.

Responsibilities:

- Good knowledge on the billing systems like AMDOCS, Telegence, Enabler, Ensembler and other systems.
- Experienced in testing Kenan Billing, CES (CRM), and SVO (Service Order & Provisioning) systems in telecom environments
- Performed end-to-end testing across customer onboarding, provisioning, activation, billing, and payment flows
- Validated CDR/EDR rating, usage charging, and full billing cycle including invoice generation and rerating in Kenan
- Tested customer management workflows in CES like new customer creation, profile updates, plan changes, SIM swap, and complaint/ticket handling
- Executed service order validation and provisioning workflow testing in SVO including activation, suspension, termination, and add-on services
- Conducted integration testing between CES → SVO → Kenan and mediation systems ensuring accurate data and status synchronization
- Performed payment, adjustment, refund, and collections testing in the billing system
- alidated taxes, discounts, promotions, prorated charges, and invoice itemizations
- Performed API testing for CRM, provisioning, billing, and network interfaces
- Used SQL for database validation of customer data, usage, order status, and billing information
- Executed error handling and negative scenarios for failed provisioning, incorrect orders, and rating mismatches
- Performed regression testing after tariff updates, system enhancements, and bill cycle changes
- Ensured end-to-end customer lifecycle validation: Order Creation → SVO Provisioning → Network Activation → Billing Activation
- Participated in UAT, SIT, and E2E testing phases with cross-functional teams
- Prepared test scenarios, test cases, test data, and defect tracking using tools like JIRA/ALM
- results, Updating and maintenance of Defects in Quality center.

Certifications

ISTQB Certified Tester Foundation Level
